

## What is Quickfire PAF?

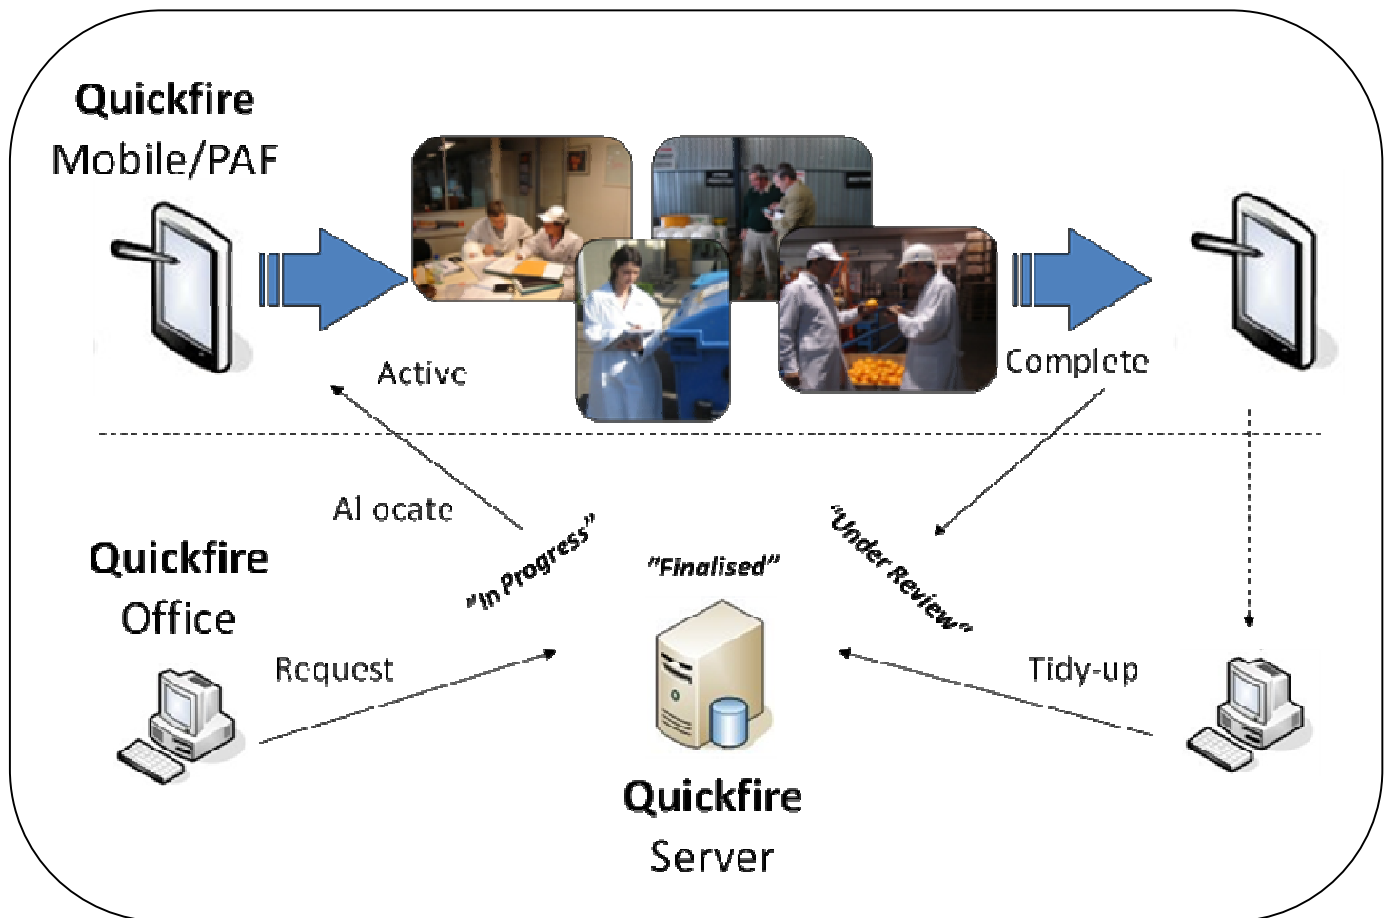

### PAF technology brings new approach to auditing...

PAF (Portable Audit Format) is the latest development in the suite of Quickfire audit management software. Using PAF technology audits can be generated from Quickfire Office and sent to anyone in any location for completion. All the receiver requires is Quickfire PAF Reader (free download from Muddy Boots) that runs on any Microsoft Windows-based PC.

Available in 14 languages PAF can be distributed in one language and received back into the database and viewed in another language - it heralds a new age for auditing!

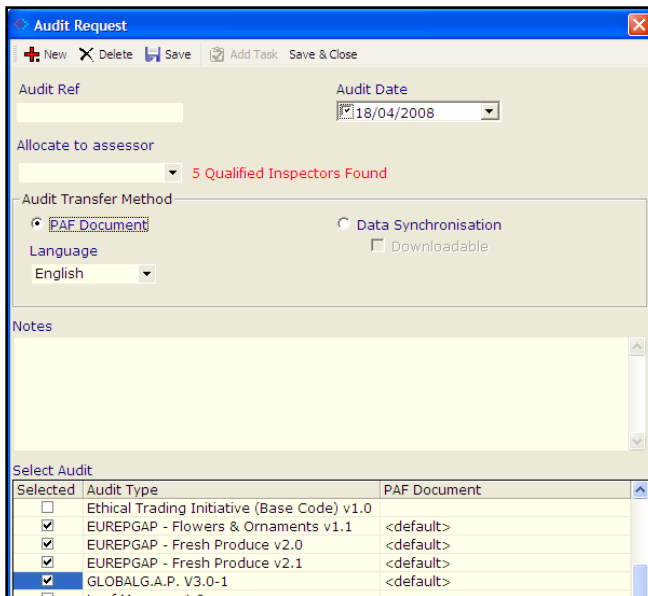

- o **Tip** - Microsoft .NET Framework v3.5 is required

### The PAF Audit Process

## How does it work?

- Simply create an **Audit Request** in Quickfire Office only this time select **PAF** option.

- Click <default> in the PAF Document column to amend the save location. When you click **Save & Close** you will be presented with an Export Complete notification.

- The PAF file can now be **emailed** to the desired recipient.
  - **Tip** - A PAF file will be generated for each audit selected in the Audit Request.
- A PAF file can now be opened offline for completion in **PAF Reader**.
- Once the assessment data has been captured offline it can be uploaded back to the 'parent' database by establishing an internet connection and clicking the Submit button in the Quickfire PAF Reader or attaching via email.
  - **Tip** - Any changes made to the audit in Quickfire Office will be lost every time the PAF is uploaded.
